Klüber Offers Innovative Lubrication Solution for Wind Power Applications

Specialty lubricants will be on display at WINDPOWER 2009, May 4-7 in Chicago

Londonderry, NH – (March 24, 2009) – Klüber Lubrication, a worldwide manufacturer of specialty lubricants, will showcase three innovative, specialty lubricants for the wind power industry at the WINDPOWER 2009 trade show May 4-7 in Chicago, IL. The lubricants are Klüberplex® BEM 41-141, Klüberplex® AG 11-462 and Klübersynth® GEM 4-320 N.

Klüberplex BEM 41-141 is high-performance grease with a special blend of base oil and additives to cover the different lubrication requirements of the individual bearing applications within wind power stations. The beige grease is ideal for pitch and yaw bearings (high stresses, oscillations, vibrations), main bearings (low rpm, high stresses, vibrations), and generator bearings (high rpm and temperatures). Klüberplex BEM 41-141 can be used in all bearing applications which allows consolidation of lubrication inventory.

Another unique product is the priming and operational lubricant, Klüberplex AG 11-462 an effective lubrication for open gears. Klüberplex AG 11-462 is esthetically neutral because it is white in color and provides excellent adhesion as well as superior protection against high loads and corrosion.

In addition to our grease products, our Klübersynth GEM 4-320 N is outstanding, synthetic oil for enclosed gear drives subject to a wide range of service temperatures. Compared to standard oil, Klübersynth GEM 4 N shows excellent wear protection for gears and

bearings, ageing and foaming resistance, cleanliness, and greater efficiency.

Klüber's *ADDED value* program has made it easy for manufacturers and operators to simplify their lubrication program.

For more information about the lubrication requirements of wind power applications, please visit booth 2639 at WINDPOWER 2009 or the web site at
